

Sensory Strategies for Teens and Adults

No. 94, March 2015

By: Jennifer Cantello Daw and Suzanne Murphy

People of all ages can require strategies that help regulate (stimulate or calm) their nervous systems. “Sensory-seeking individuals often continue to crave input as they get older...sensory-seeking can impact an individual’s work, leisure and self-care. Remember the need for intense input does not automatically disappear just because a person is older”.¹

What are fidget items?

A fidget item is a small object used to provide input into any of the senses and “may help improve concentration and attention to task”.² Unless specific items are identified and used in a planned way, people may engage in a wide range of sensory behaviour, that at least can be distracting to others and at worst, harmful.

Guidelines for selecting and using fidget items:

- A good fidget item is one that provides the input being sought, helps maintain a calm, alert state and can be used in a variety of environments, while not causing distraction for the user or those around him or her.
- Additionally, the item should be safe, quiet, relatively small and portable.
- Selection should be based on a number of considerations:
 - The sensations and textures the person seeks out or avoids;

- When and where the fidget items are most likely to be needed;
- The person’s fine motor skills and hand strength;
- The suitability of the item to be used in a public place;
- Behaviour that can be socially stigmatizing or dangerous (e.g., putting objects in mouth, throwing items, etc.);
- Items that the person is interested in or motivated to use;
- Have a variety of items available and continue to expand possibilities. Avoid relying on a limited number of very specific items.

Guidelines for introducing and using fidget items:

- Identify where the items will be kept (e.g., in a specific place, in their backpack/pocket/desk/locker, etc.), as well how and when the person can access them and when they need to be put away.
- Pair accepting and using the fidget item with reinforcement.
- Attach the item to prevent it from being lost.
- Monitor (or teach the person to self-monitor, when possible), not only the effectiveness of the fidget item in meeting sensory needs but also how socially acceptable it is.

Examples:

Tactile Fidget Items

- Origami
- Shells, smooth or shiny stones
- Worry beads, dolls, stones
- Jewellery (necklace, bracelet, anklet, digit fidget/ring, earrings, charm bracelet)
- Paperclip/paperclip chain
- Rubik's cube
- Key chain
- Paper clips, rubber band
- Linking rings
- Small piece of specific fabric
- Hacky sacks
- Leather bracelet

Visual Fidget Items

- Pen toppers or pens with moving parts
- Small sand timer
- Lava lamps
- Glow sticks
- Apps
- Picture books
- Video clips on phone/iPad (e.g., waterfalls, car races, nature, etc.)

Oral Fidget Items

- Hard candy
- Sour candy
- Gum
- Straws
- Crunchy/chewy snacks available
- Pen toppers designed to be chewed

Scented Fidget Items

- Locket with scent inside (necklace or bracelet)
- Preferred air freshener (e.g., in the car, on a timer)
- Incense
- Scented candles

- Essential oil sachet/pillow

Auditory Strategies

- Earphones, earplugs, headphones
- Jewellery/key rings with chime or soft bell
- Ticking watch
- Music on iPod

Movement (vestibular) and deep pressure

- Daily physical activity/physical education class
- Weight room
- Heavy backpack
- Tie a resistance band to chair or desk legs
- Sit and move cushion
- Fingerless gloves
- Clothing that provides deep pressure

Sensory Strategies Across the Day

One of the most effective ways of meeting a person's sensory needs is to incorporate individualized items and activities into daily routines or to teach them to access activities that provide the sensory input they require, such as:

- Make favourite scents, colours and textures part of activities;
- Consider sensory needs in self-care routines (e.g., loofa sponge, scented soap, heavy towel, electric toothbrush);
- Incorporate exercise and movement routines (e.g. dancing, stretching, yoga) at intensity needed;
- Allow standing or other alternative seating;
- Create calming routines before bedtime.
